

CIRRUS MINOR B.A. "Swallow"

The name "Cirrus" is derived from the cloud formation which indicates "high clouds and fine flying." What could be more appropriate than the combination of an engine worthy of such a name, with an aircraft which is as graceful in flight as the bird after which it is named.

Have you flown a Cirrus "Swallow," and have you enjoyed the slow and safe "approach" afforded by this machine? If not, take the first opportunity to do so and then pay us a visit at Brough, where we will show you the "Cirrus Minor" in construction and so convince you that the

"Cirrus Minor" will give you lasting service.

It usually takes more than one swallow to make a Summer, but one "Cirrus Swallow" can make for you a carefree summer, with many happy landings.

The "Cirrus Minor Swallow" is already in use in many Light Aeroplane Clubs at Home and Abroad, whilst many eminent and well-known personages have chosen this power unit for their Swallow Aircraft.

Be sure to specify a "Cirrus Minor Swallow" for Reliability and Endurance.
